Education

Harcourt Butler Technical University (HBTU)

Aug 2023 – Aug 2027

Bachelor of Technology in Information Technology - CGPA: 7.736

Army Public School, Jammu Cantt

May 2022 – May 2023

CBSE XII - AISSCE - 88%

Technical Skills

- **Core Stack:** JavaScript, TypeScript, React, Node.js
- **Backend:** Express.js, GraphQL, REST APIs
- **Database:** MongoDB, PostgreSQL, Redis
- **DevOps & Cloud:** Docker, Kubernetes, GitHub Actions, Jenkins, CI/CD
- **Tools & Testing:** Git, Postman, Jest, Grafana, Prisma, Promtail, Loki
- **Familiar With:** Python, Django, C++, Java

Experience

R&D Intern

Dec 2024 – Jan 2025

The ROAC

Remote

- Constructed and executed experimental workflows on structured datasets to improve analysis efficiency.
- Automated reporting and documentation procedures, saving five to six hours of manual effort per week.
- Collaborated with cross-functional teams to identify optimization opportunities and implement data-driven solutions.

Projects

Vistagram | [GitHub](#)

Node.js, React, Docker, Kubernetes, Microservices

- Engineered a microservices-based social media platform featuring a modular design for authentication, feeds, media, and notifications.
- Architected RESTful APIs and asynchronous inter-service communication using message queues.
- Orchestrated container deployments using Docker and Kubernetes to ensure reliable and robust operations.
- Established continuous integration pipelines, reducing deployment times to under fifteen minutes.
- Integrated Grafana to monitor more than ten system metrics, including application health, latency, and resource utilization.

Standup Tracker | [GitHub](#) | [Live Demo](#)

React, Node.js, PostgreSQL, Groq AI, Docker

- Engineered a full-stack platform to automate daily standups by extracting GitHub commits and PRs into structured reports.
- Architected a 5-agent AI scoring pipeline using Groq (Llama 3) for parallelized quality assessments in under 2 seconds.
- Deployed a production observability stack via Docker, integrating Prometheus, Grafana, and Loki to monitor metrics.
- Secured API endpoints using three progressive layers of rate limiting via Nginx and Redis-backed request throttling.
- Established CI/CD pipelines via GitHub Actions to enforce strict test coverage, secret scanning, and automated builds.

Achievements

- Solved over 500 algorithmic problems on LeetCode.
- Achieved a competitive rating of 1300+ on CodeChef.
- Participated in over 15 collegiate and global hackathons.
